CEBIT 2007 TSUNAMI ALARM SYSTEM OVER MOBILE PHONES REALISED

(ASSODIGITALE.IT) **Holidaymakers can now relax and securely go on their well-earned beach holidays. Business travellers can now securely travel to coastal business capitals. Residents of coastal areas need no longer fear for their health or their lives.**

In future, travellers will be warned in time of catastrophes like the tsunami that occurred more than a year ago in Asia, with the world-wide unique tsunami alarm system for everyone. In every reachable place in the world, people can receive a message on their mobile phone in case there is a threat to their lives in places where they are. They only have to register their mobile phone with the Tsunami Alarm System and in the event of an alarm it will send a message that cannot be ignored. "We bring an attractive business opportunity for merchants in coastal areas to Asia/Pacific", says Prof. Dr. Wolfram Reiners.

Tsunamis are caused by the sudden displacement of huge bodies of water. Most tsunamis are the result of earthquakes or seaquakes, or are set off after submarine landslides. The term "tsunami" is Japanese and means "big wave in the harbour". Tsunamis can travel at speeds up to 1000 km/h, or close to 17 kilometres a minute.

People are not only in danger in far away countries, but also on European coasts. While children are building sandcastles on the Mediterranean and their parents are basking in the sun, no one thinks of a lethal flood wave. Yet, in the Mediterranean and the Atlantic Ocean, tsunamis are not as rare as many people believe: About 10 per cent of all tsunamis happen in these regions.

Measuring stations all around the world operate day and night to be able to warn quickly and reliably of tsunamis: Seismic sensors measure the earth tremors. Pressure and velocity sensors in the oceans detect fast changes of water bodies in the sea. Advance warning systems check first alarm signals. With the Tsunami alarm system, users can visit popular holiday destinations at the seaside now without having to worry about their safety or life and health of family and children travelling with them. Subscribers to the Tsunami Alarm System receive a warning on their mobile phones, promptly and virtually anywhere in the world. Users can be sure that the Tsunami Alarm System does not overlook any warning messages and that a warning will set off an alarm on his mobile phone as soon as possible.

Despite the complex technologies behind the alarm system, it is very easy to use for subscribers. Coastal residents, tourists, business travellers, employees of companies working in coastal regions, for example tour guides, can subscribe to the Tsunami alarm system by simply entering the number of their mobile phone on the web site, thus quickly enabling the alarm system on their phone. Nothing has to be installed or downloaded. As the system is so easy to use, some international companies are already interested in providing their employees with the Tsunami alarm system to offer them additional security for their stay in coastal regions.

The tsunami alarm system uses "Flash SMS" messaging which "pushes" the message onto the front screen of the phone even if it is being used.</p> <p>The Tsunami alarm system was invented and developed by the German scientists Professor Dr. Eduard Heindl and Professor Dr. Wolfram Reiners, Tsunami Institute A3M AG in Tübingen/Germany. Both are constantly surveying the quality of the system and are developing it further through their research to the benefit of subscribers. While the research results have been filed for patent protection in Germany, further patents are in preparation.</p> <p>Customers can subscribe to the tsunami alarm system on the web site www.tsunami-alarm-system.com. The one-year subscription costs only 29.95 Euro. There is also a monthly subscription for holidaymakers available for the price of 9.95 Euro.</p> <p>About the Tsunami alarm system:</p> <p>The idea of a tsunami alarm system arose in December 2004 in the aftermath of the devastating destruction of the Tsunami catastrophe in the Indian Ocean. The German professor Eduard Heindl and professor Wolfram Reiners wanted to use modern information technology to be able to warn people in time in case of similar occurrences, thus being able to better protect human life in the future. To achieve this, many systems must work together. The technical details of the Tsunami alarm system are filed for patent protection at the German patent office. Tsunami Alarm System is a product of the Tsunami Institute A3M AG under the presidency of Wolfram Reiners und Eduard Heindl.</p> <p>For further information: A3M AG, Prof. Dr. Eduard Heindl, Prof. Dr. Wolfram Reiners, Hintere Grabenstr. 30, D-72070 Tuebingen, Germany Phone: +49 (0) 7071 97559-45, Fax: +49 (0) 7071 97559-59, E-mail: info@tsunami-as.com Internet: www.tsunami-alarm-system.com</p> <p>Press contact: Konzept PR GmbH, Juergen Gocke, Karolinenstr. 21, D-86150 Augsburg, Germany Phone: +49 (0) 821 34 3 00 0, Fax: +49 (0) 821 343 00 77, E-mail: gocke@concept-pr.com, Internet: www.concept-pr.com</p> <p>Tsunami Alarm System ready for the Global Market <u>Andreas Koch responsible for Customer Service, Marketing and Sales</u></p> <p>Tuebingen (Germany), February 8, 2007. Dr. Andreas Koch has been announced new Chief Customer Officer (CCO) of Tuebingen A3M AG at the beginning of this year where he is also responsible for the Tsunami Institute. The 45 year old is an expert in the field of Customer Service, Marketing and Sales and takes over a leading position that is not very common in Germany yet.</p> <p>According to his motto "A good product alone does not satisfy the customer", Koch sees his task in extending functionality and user friendliness of the Tsunami Alarm Systems as well as in coordinating the worldwide marketing. By establishing the business unit Tsunami Institute, the company has taken the first step into this direction. "Primarily, we consider ourselves as a service provider, very similar to an aid organisation. That's one of the reasons why we want to focus on increased customer orientation", emphasises Koch.</p> <p>Koch, who has a PhD in physics, founded his first IT Company in 1998 in Tuebingen; four years later, he employed 25 people. After the consolidation of Dr. Koch AG with transtec AG, Andreas Koch was responsible for the Competence Centre. In 2006, he became Head of Technology and worked in this position until he took over the CCO post for A3M.</p> <p><u>Earthquake Reports and Tsunami Warnings via Phone</u> <u>Tsunami Website now also shows Earthquake Events</u></p> <p>Tuebingen/Germany, December 14, 2005. Devastating destruction and thousands of victims after the latest large earthquake in Pakistan have shown how powerless mankind can be in the face of natural disasters. A new Tsunami website now shows when and where earthquakes occur and how dangerous they are. The website is connected to several hundreds of measurement stations all over the world, with which it is in constant contact. Results received from these</p>	<ul style="list-style-type: none"> • Gruppo 3 (Hutchison Whampoa): raggiunti 14,72 milioni di clienti UMTS nel mondo ricavi oltre 5,2 Mld • 100.000 centralini telefonici IP PBX gratuiti in palio • Nuovo assetto AIIP: Marco Fiorentino eletto Presidente all'unanimità • Proprietà Intellettuale: AIIP esprime perplessità sulla proposta IPRED2 • IPRED2: I Provider Italiani applaudono la decisione del Parlamento Europeo • MINISTERO DELLE COMUNICAZIONI SECONDO GENTILONI ENTRO ESTATE GARE WI-MAX • A RIMINI OBIETTIVO PUNTATO SULLA VIDEOSORVEGLIANZA AL SERVIZIO DELLE AMMINISTRAZIONI LOCALI • PLAYSTATION 3 SONY CONTRO TUTTI PER LANCIO ANTICIPATO SENZA AUTORIZZAZIONE MEDIAWORLD SATURN UNIEURO • A Sanremo il 1° Convegno Distrettuale Lions sulla sicurezza dei Minori in rete • PLAYSTATION 3 DI SONY ARRIVA IN ITALIA INIZIO DELLE VENDITE IN ANTICIPO DA MEDIAWORLD SATURN UNIERO • CONVEGNO CNR Rapporto sulla popolazione, L'Italia cresce, ma solo grazie al contributo straniero • CONVEGNO CNR NASCE LA PRIMA AULA DI UDIENZE VIRTUALE CON ANALISI GIURIMETRICA SU 32.000 SENTENZE • PLAYSTATION 3 GIA' IN VENDITA DA OGGI ALL' UNIEURO LA PLAYSTATION 3 DI SONY GRANDE ANTEPRIMA • Staff&Line lancia EasyVista 2007 nuova versione della soluzione di IT Management • VODAFONE FA CHIAREZZA SULL'SMS VOCALE CRITICHE STRUMENTALI, ECCO TUTTE LE INFORMAZIONI • NUOVA ALLEANZA STRATEGICA TRA MITEL E OPERA NETCENTER <p style="text-align: right;">SONDAGGIO</p>

stations are immediately analysed and the results published on the website. This offer complements the first Tsunami Alarm System, which sends warnings to mobile phones and is offered on the Tsunami website.

Earthquakes can happen anywhere and more frequently than is realised. Every day, seismic stations all over the world record eight to ten tremors of size four or more on the Richter scale. Only a few of them are greater than size six, which would result in a disaster of the dimensions of the recent earthquake in Pakistan.

The A3M AG online service gives governments, disaster agencies, aid organisations, tourists, tour guides and journalists sufficient notice of such incidents and enables them to quickly initiate supporting measures. The Earthquake Information System processes seismic data from all over the world in only a few seconds. If there is a tremor in the earth's crust, it is recorded by hundreds of seismic stations worldwide. The information is then sent to earthquake research centres via satellite and fibre connections and the data is released on the internet. The Earthquake Information System analyses the data and prepares up-to-date warnings, which can be found on www.tsunami-alarm-system.com. All current earthquake warnings are listed with the exact date, hour, size and the affected regions. Supplementary information and background data about earthquakes top the service.

In the future, this information will also be transmitted to mobile phones. People to whom this information is of special interest such as journalists or disaster helpers can then receive earthquake warnings within a few minutes. Thus, time can be saved and aid can be sent to stricken regions much faster.

The earthquake warning system is based on the technologies of the Tsunami Alarm System. This system forewarns holidaymakers and coastal residents of potential tsunami disasters like the one that devastated the coastal regions in Asia last year. In every reachable place in the world, people can receive a message on their mobile phone in case there is a threat to their lives in places where they are. They only have to register their mobile phone with the Tsunami Alarm System and in the event of an alarm it will send a message that cannot be ignored.
